No need for additional expensive hardware or new service. This service can be added at any time.

Activity & Safety Monitoring

INS LifeGuard offers passive Activity and Safety Monitoring as well as Home Security Monitoring – at very competitive pricing. This service uses one or more low-cost Infra-Red (PIR) motion detectors to passively monitor a user's surroundings. It then reports back to a friend, family member or carer who can check on the user to ensure all is well.

Signals from the PIR motion detector are sent to the LifeGuard SmartHome IPD where they are recorded and checked against pre-set criteria to detect whether assistance might be required. The criteria that triggers an alert can be set up via our secure Client Web Portal at any time.

For example, you could set triggers for conditions* such as:

- User hasn't left their bedroom by 8 AM
(to detect whether a loved one is up and about)
- User hasn't entered or exited the Bathroom
- User hasn't moved around the lounge between 8 AM and 11 AM
(to ensure they are active and moving about the home)
- User hasn't walked into the kitchen between 11 AM and 2 PM
(to detect significant changes in behaviours, e.g. they may not have eaten)
- User hasn't entered the bedroom by 9 PM
(to check if they've gone to bed)
- User turns on Home Security Monitoring, arming all detectors
(indicating they've activated Home Security / Burglar Mode)

Once the conditions are set, notifications will be sent whenever they are triggered. This can include displaying the notification in the Client Portal as well as sending a notification to family/carers, etc.

* Requires optional PIR detectors to be installed in each area.

Home Security Monitoring

When the LifeGuard SmartHome is connected to monitored Infra-Red Beams (PIRs), it can provide home security by monitoring movement in and around your home. This can provide added peace of mind, helping to ensure your family and home are safe. Simply install Infra-Red beams in the locations you wish to monitor, and alarms can be triggered whenever an intruder is detected.

Passive Activity & Safety Monitoring Accessories

Infra-Red Beams (PIRs)

INS LifeGuard's Infra-Red Beams are wireless. They can be used to detect movement, thereby providing a monitored household security system.

External Strobe Light

Activating an outdoor strobe light in the event emergency services were summoned to assist helps them locate the proper unit, e.g. in a retirement village setting.

SmartHome Mate

This smart companion to the SmartHome IP Dialler provides added functionality as a call point and also supports many of the features and functionality of the IPD, allowing you to access services throughout the home.
